The Problem

- US hospitals lose billions yearly due to claim denials and underpayments.
- Billing teams lack real-time visibility into which payers deny, why, and how much cash is stuck.
- SettleMed (a Noida-based healthcare billing startup) needed a single source of truth to monitor, investigate, and recover denied claims.

Business Questions Answered

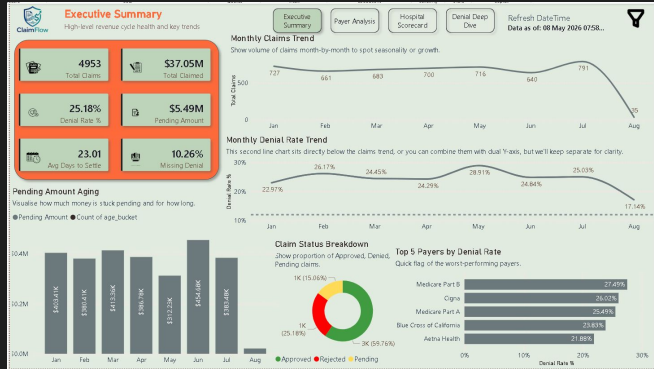

- Which payers deny the most claims and why?
- 2. How much money is stuck in pending claims and for how long?
- 3. Which hospitals have the worst denial rates?
- 4. What is the financial impact of denials and are appeals worth the effort?

Solution Architecture

Denial Deep Dive

Refresh DateTime
Data as of: 08 May 2026 07:58...

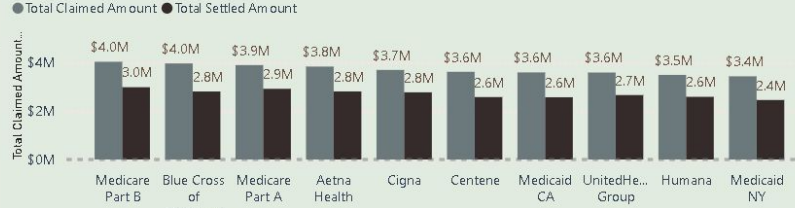

Denial Rate by Payer

Compare each payer's denial rate against the overall average.

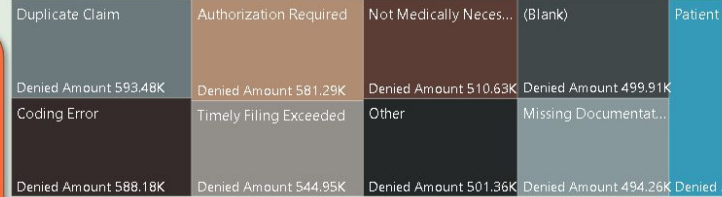

Revenue Gap per Payer

Show the claim amount vs. actually settled amount to visualise revenue leakage.

Denial Reasons by Frequency

Visualise the distribution of denial reasons across all payers.

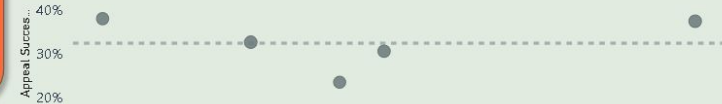

Appeal Efficiency Scatter Plot

Determine if appealing denials is worth the effort. For each payer, we need to see appeal success rate vs. denial volume.

denial_reason	Denied Claims	Denial Rate %	% of Total Denials	Avg Days to Settle
Authorization Required	128	3.34%	10.26%	23.17
Coding Error	147	100.00%	11.79%	25.09
Duplicate Claim	147	100.00%	11.79%	21.27
Missing Documentation	156	100.00%	12.51%	21.60
Not Medically Necessary	135	100.00%	10.83%	22.59
Other	149	100.00%	11.95%	21.21
Patient Not Eligible	146	100.00%	11.71%	22.08
Timely Filing Exceeded	110	100.00%	8.82%	23.03
Total	129	100.00%	10.34%	24.05
Total	1247	25.18%	100.00%	23.01

Appeal Efficiency Scatter Plot

Determine if appealing denials is worth the effort. For each payer, we need to see appeal success rate vs. denial volume.

Hospital Scorecard

Filled Map, Hospital Comparison Table, Scatter Chart (Volume vs. Denial Rate)

Denial Deep Dive & Financial Impact

Waterfall Chart, Recovery Funnel, Aging Heatmap, Top 10 Denied Claims Table

Technical Highlights

- Star schema with 4 tables (dim_hospitals, dim_payers, dim_date, fact_claims)
- 20+ DAX measures – Denial Rate, Recovery %, MoM Growth, Appeal Success, Data Quality
- Power Query automation – 6 cleaning steps (duplicates, mixed casing, missing reasons)
- Handled real-world messiness directly from raw healthcare export files

Key Insights & Recommendations

- Commercial payers deny 15-18% of claims; top reason: “Missing Documentation”
- ~\$450K stuck in pending claims, 20% older than 90 days → implement automated alerts
- Appeals recover 50% of denied dollars, but only 40% are appealed → create appeal templates
- Two hospitals flagged with >25% denial rate → recommend coding audits
